

I am the Founder and CEO of Vivace Health Solutions that is working on bringing artificial intelligence applications to routine healthcare. We have been working with Rutu as our expert data scientist consultant in Natural Language Processing of patient electronic records to help improve decision support in complex areas such as traumatic brain injury and hospital acquired infections. We are very pleased with Rutu's support, and plan to continue our relationship as we progress in our research and deployment of cognitive support tools for clinicians that will ultimately improve outcomes for patients .
